

Abstract

In this thesis project examined analysis of 51 protocol, statistical information to be collected from the standard ST RK 2267-2012. According to data obtained using a Wireshark network analyzer, have been defined protocols that use the Hypertext Transfer Protocol HTTP, as well as the version of the protocol and methods of HTTP. HTTP traffic portion, the amount of disk space on the server and bandwidth connection to the Internet were calculated. In addition, a business plan and the issues of health and safety were developed.
