

Abstract

In the diploma project were considered the organizations of construction hybrid optiko-coaxial (HFC – Hybrid Fiber Coax) networks in the city of Kyzylorda.

Also in the project have been calculated and are given information about the dual coaxial and fiber-optic cable, in connection with the physical environment of the network. According to calculations, schedules were constructed.

In the section safety of activity are considered lighting in the room for research works and fire safety.

In carrying out the project research justifications are made.
