

**Abstract**

The private analyses of flow diagrams of the chosen radio-location stations were done in this diploma project, separately stopped for distribution of radio waves. At the same time, doing the short review of types of модуляций applied in a radio-location, a standard was made in the program System View. Primary objective of проекта- all-round to study a radio-location, define the degree of dependence of wave-length from distance.

In part of safety of vital functions were shown and expected protecting of workers from fires in jobs.

Economic bases of project are given in economic part of diploma project, expenses are expected on implementation of research works and a businessplan over is brought.
