Annotation

This thes is is devoted to the creation of a site on Ruby on Rails. As the theme for the development I have chosen the site for broadcasting video reviews and live broadcasts of football matches. Frontend site was written in markup languages HTML, Javascript, and CSS, also under the control of the Apache server.

Graduation project combines an introduction, five chapters and a conclusion. The introduction described the whole point of creating the site, its relevance in the marketplace. Five sections describe the development tools, development tools, their pros and cons, a full description of the appearance of the site, its full functionality. In conclusion, the findings have been described after the work done. The sections of the economy has been described a complete description of its value on the market and has been calculated on the amount of development of the site and out. The life safety, it was found that that may adversely affect human health. It is also a condensation of air and fresh air in the work. It identified that the person may be detrimental to the lighting in the work room. All these shortcomings have been identified and eliminated.
