Annotation

Theme of the diploma project "Development of an IS for an energy-retail company".

The IS is developed for an energy-retail company, and it allows storing customer data of the company, including indications from the electricity meters, and making calculations at established tarrifs.

As an example for IS was chosen energy-retail company ТОО «АлматыЭнергоСбыт».

This software allows you to reduce rhe time required for processing information and speed up the process of customer service. The IS is implemented in

Borland Delphi 7 visual programming environment, the database is stored in the Microsoft Access relational environment.

The issue of safety of vital activity and the economic efficiency of the program were also considered.
