

Annotation

The field of research of this work is the study of effective methods of organizing independent work of students in the conditions of a modern training system. The graduation project developed a system for monitoring students' knowledge, including: a test editing module, a test control module, a work module on a simulator.

The project is implemented in the Delphi environment. This project is intended for use in educational institutions for intermediate and final control of knowledge, as well as for self-monitoring of students' knowledge.
