

Annotation

In the thesis, an application for a shoe store was developed. With the help of this program you can keep track of and monitor sales of the boutique. As a result of the work, the domain was analyzed, computer programs were selected and an application interface was developed.

The database was developed in the Oracle database. The C # programming language was used to write the interface. In addition, an economic confirmation of the project, supporting its economic necessity, and a study of the working conditions for the study of the application being examined are compiled.
