Abstract

The diploma project was made to automate complex, unfavorable for learning processes, and also to reduce the loss of time.

In the diploma project, a study was done with the organization of the system, analogues of this system were analyzed and a plan was developed to alleviate routine problems. Therefore, the system was developed, advertising and analytics were set up, design was improved and a system for sending assignments to students was created.

And also the question of safety of vital activity was considered and the economic costs for the development of this system were calculated.
