

Annotation

In this project we consider:

- methods of designing a relational database;
- methods for implementing SQL queries in Visual Studio 2013;
- methods for creating a graphical interface;
- a bundle of the application application with the Oracle DBMS;
- development of solutions for production purposes.

In the section of the economic part, the economic costs of the project, as well as the value of the equipment used, are considered. In the section on life safety, the main normative indices of the microclimate and the allowable visual load of the worker are considered
