Annotation

This graduation project includes the development of software with a convenient and ergonomic management interface. Which includes two programs, called: screen and keyboard spy. Latent monitoring allows you to track user activity on computers, recognize keyboard shortcuts and do not require some effort and cost.

For this purpose, KeyLogger and the program of screen espionage were used and the general program was developed in the development environment of the Visual Studio software using Visual C++ 2017.

In the graduation project describes the economic efficiency of the project, as well as labor protection measures in the implementation of the project.
