Annotation

This diploma project is intended for the development of web programs on students ' knowledge and computer literacy. In this graduation project was developed a project aimed at creating an information system in PHP. When developing the project, applications were used to create a testing system: HTML, PHP, JavaScript, Mysql. The web-based program allows teachers and students to effectively carry out pedagogical control in the minimum time.

The problem of life safety during the development of the information system was verified and the lighting was calculation coefficient. Also in the economic department was determined the cost of labor, the cost of labor and work efficiency.
