

## **Annotation**

The main objective of current thesis is to create a web-site for an advertising agency, which will achieve the goal - sell via the Internet. The information system is implemented by using tools such as HTML language of hypertext documents, CSS the language describing the appearance of the document, multiparadigm JavaScript programming language, and a database which was created. The developed web-site has five pages with included media and internal documents, as well as the ability to apply for the services of companies. This diploma project contains the analysis of opted development tools in the web environment, as well as the implementation of this web-site. The information system was developed for the advertising agency "ALL TEAM".
