

## Annotation

This diploma project presents a system of online English language training for "My Brain". The first part of the project reflects the analysis of the relevance of the English language and competitors in modern society, comparative analysis and the difference of our project from other systems.

The second part contains information about UML diagrams used for system design.

In the third section, the programming languages for creating the Android mobile application and the description of the system are shown in the diagram and shows the practical implementation of the project.

The fifth part discusses the feasibility of the project. That is, it was shown how much damage will be caused to the project.

In the sixth section, recorded, studied, under what condition
