

## **Annotation**

Diploma project is presented on the theme “Development of information system «OnLine Department»”

The aim of the work is to create a web portal to facilitate the workflow of employees of the Department of higher Education using the programming language PHP.

The result created a web portal that provides authorization parameters, qualifications, publications, advisers sections. The Frontend section is written using HTML5, CSS3, JQuery, AJAX. The Backend section uses PHP, YII2, APACHE, MySQL. In the authorization section, the user can change his password. In the qualifications section, the user can include their qualifications in PDF format. The publications section can also track your publications in PDF format. In the adviser Department adviser can get full information about their students.
