

## **Annotation**

The relevance of this topic is due to the fact that in foreign markets there is a huge number of software packages that allow you to make a full analysis of the economic condition of the enterprise, but the domestic market of programs does not have the resources even for basic calculations.

The aim of the thesis is to create an information system that provides all the necessary indicators for the calculation of the investment activity of the enterprise and the description of the General economic situation.

According to the results of the diploma project, an analytical information system was created for the calculation of the evaluation of investment projects.

The obtained IP will provide the minimum time for the basic calculations, as well as contribute to a short, correct compilation of estimates of cash investments in investment projects.
