

Annotation

This diploma project is designed for the design and development of a database using CASE – tools for the enterprise Procter&Gambel using WEB technology. Python programming language and Django framework were used for development.

Python libraries were used to create a web site for the enterprise. We used CASE – Erwin tool for designing and created UML diagrams.

It was still calculated in the economic section of the cost of the program and the profit of the project. And in the security section and livelihoods we looked at the ventilation system, in building problems with ventilation.
