

Annotation

As a result of the degree project was built an automated information management system of enterprise with using the programming language Delphi. This system includes sections, organizations, and classifications of data. Because the principle of the Delphi environment is based on the Windows system. Therefore, the user familiar with the Windows system will not be difficult to create a database in Delphi. This degree project provides a solution to the problems faced by enterprises, firms, organizations that have the ability to use any of the parties (new information technology) to solve the problems of minimizing the amount of work spent in the process of working with securities and for direct exchange of information with the client. When automating the client-server operation, the minimum allowable risk of errors occurring among themselves has been achieved.

In the degree project, a program with a user-friendly interface was created, based on the implementation, processing, sorting, printing data, analysis based on data, training in the automation of technological processes in order to automate the work of the enterprise and the development of modern technological means.
