

Annotation

This thesis project is dedicated to the development of mobile application «Students Diary», which will allow students to plan their study schedule.

This application will allow you to receive all the necessary information in a user-friendly means of modern gadgets. It will display not only news and schedule elements, the application will also have the functionality of a notebook-glider.

The software is implemented using Android Studio, an object-oriented Java programming language. In the main part, the student's student diary mobile application was fully described.
