Annotation

Theme of the graduation project: " Development of an information system for the accounting of sales of gifts and souvenirs."

The purpose of the graduation project is that with the help of a graduation project a company can improve and consolidate its position in the market for goods and services, increase the popularity of the brand, and increase profits. The buyer will also be able to appreciate all the advantages of purchasing goods online. The modern pace of life makes us save time as much as possible on everything, including going to the shops.

To achieve this goal, the following technologies were used:

- for client interface development: HTML, CSS, JavaScript, Bootstrap;
- for database design: MySQL, OpenServer;

The thesis project includes an introduction, 5 chapters and a final conclusion.

The introduction reveals the relevance of the chosen topic, sets the development goal and the tasks that need to be performed, determines the scope of the development.

The first chapter analyzes and selects technologies for solving the problem. The second chapter describes the design of the application.

The third chapter is a description of the development of the application, contains a step–by–step description of the practical solution of the problem.

The fourth chapter is the rationale for the economic feasibility of the developed project.

The fifth chapter deals with measures to improve working conditions in the framework of the ongoing project.

The conclusion highlights research and development results: modern client–server web application development tools have been studied and development has been carried out according to the set goal.
