

Annotation

The use of information systems in the health centre is the main solution in protection, the use of which will lead to economic and rational use of resources. Therefore, it is necessary to discuss the introduction of information systems and technologies in health care, which, taking into account the peculiarities of its work, will appoint an unconditionally responsible person for the solution of practical health issues, including the production activities of any organization.

The main purpose of the diploma project is the organization of financial resources of information technology, material values of medical workers, time and labor costs for medicines and medical products, i.e. Management accounting in health care institutions. The project automates the activities of the clinic with the help of a statement drawn up in the form of a spiral.
