

ANNOTATION

In this project, the protection system of the HSC “Inspector” was introduced into the information environment of «PC4U» LLP.

In the process, the actual problem of protecting against the leakage of confidential information and limited access to the information environment of organizations was analyzed, which requires the introduction of new software and hardware solutions.

In the “Economy” section, costs were calculated when constructing and implementation of the system.

In the section "Life Safety" was calculated the working conditions with the corresponding tests.
