

ANNOTATION

This diploma project is devoted to the study of the subject area of the influence of social networks on information security, analysis of the subject area of the information-psychological influence of social networks and people's behavior, research of correlation between people's behavior and possible risks of information security, analysis of data obtained during the study. Various psychological theories used in information security and in the information sphere in general were analyzed. A series of research questions were compiled, from which we tested hypotheses for correlation between people's behavior in social networks and their awareness of the dangers and risks of ignoring the basic rules of information security.
