

Annotation

The object of the research is the automated workplace of the operator of the automatic control system of the gas distribution station

In the work reviewed the methods of ergonomic design and obtaining information for ergonomic design, the analysis of normative-technical documentation in the field of ergonomics of the workspace and the workstation of the operator of the workstation. When designing the workplace, the working tasks of the operator of the ACS GDS, which include the process of monitoring the technical systems of the GDS, were taken into account. The layout of the workstation's monitors used identification space.
