

Annotation

The theme of the final design work is the expansion of the Western thermal complex. For the implementation of this project in the introduction laid the basic prerequisites and in the process of calculation of auxiliary equipment of thermal parts and thermal circuits. Here are the features of the auxiliary equipment of the boiler, construction equipment, diagrams, calculations and drawings.

Environmental and technical safety issues have been developed, technical and economic indicators have been calculated. The calculation is made to reflect the economic efficiency of investments.
