

Annotation

In the thesis of the thesis on the feasibility study of the construction of the Turkestan thermal power plant, a General project of the heat power center of Turkestan is provided. In the main part of the thesis selected the main and auxiliary equipment. The life Safety section provides the device necessary for the safety of the venturi scrubber. This diploma project provides for the construction of a heat source in connection with the growth of the population of the city of Turkestan. This is due to the fact that in the design of the CHP project it was planned to minimize the cost of the environment, as well as to minimize economic costs.
