

Annotation

In this work, we organized a video surveillance system for the company "Energy ". Equipment, connection diagrams are presented, calculations of necessary parameters are made. A business plan was presented and safety issues were addressed. The main objectives of the installation of video surveillance systems at the enterprise are to provide additional security and control of employees of the enterprise. In the Department of Economics we found how much money for this plan and its repayment period. In the Life Safety Department, we identified the necessary microclimate of the room and installed artificial lighting in the room. I provided fire extinguishers.
