ANNOTATION

In the modern world, the level of informatization and progress in the field of information technology is constantly growing in developed and developing countries. Today, the use of information technology in the field of trade significantly reduces the cost of maintaining retail space.

For many companies, the key is selling goods and services online and finding new suppliers and customers. Having an online store is a competitive advantage.

The aim of the thesis is to create an online store to facilitate the lives of people and save time using modern technology.

The proposed program allows the site user to get acquainted with the products in the catalog, compare prices, choose a color and order. The software was created with a very lightweight design for the convenience of the public.

This software is a program that can be used for commercial purposes and will be improved in the future.
