

ABSTRACT

Subject of the graduation project: "Development of information-training system on IT hygiene"

This graduation project implements the development of an information guide for the proper use of a personal computer.

The graduation project was carried out in the format of an Android application. To implement the graduation project, technologies such as HTML, CSS, Android studio, Java script were applied.

Also, an economic calculation of the costs and costs of developing the program was carried out, an assessment of the economic feasibility of the project being developed, and measures were proposed to improve production lighting.
