

Abstract

The theme of the diploma project: «Development of a continuous risk control subsystem for a company's business support system».

This diploma project included the development of an automated food ordering and sales system for the HoReCa segment, which aims to minimize the company's risks and create a food ordering service in the cities of Kazakhstan, where restaurant owners will receive a high-level service and usability, and suppliers will receive an additional sales channel for their products.

The diploma project was made in the format of a web platform. Technologies such as HTML, CSS, PHP, and JavaScript were used to achieve the goal of the diploma project being developed.

In addition, a financial calculation of the cost and price of developing the program, an assessment of the financial need for the project being developed, and measures to improve the quality of industrial lighting were proposed.
