

ANNOTATION

The theme of the graduation project: «Development of an automated system for building materials calculating».

The graduation project is dedicated to the development of an automated information system for the calculation and calculation of building materials. The developed program improves the calculation and calculation of building materials. The program was implemented in a database programming language in an integrated development environment Delphi using various libraries.

In addition, in the final work, an analysis of existing programs is carried out, as well as considers the issues of life safety and economic efficiency from introducing the system into production.
