

## **Annotation**

As part of this graduation project, a document management module for a floristic company was developed.

The purpose of this software product is to automate and optimize internal business processes.

The thesis project describes the algorithms of the developed module.

An information portal with a document management module will reduce the time and finances of a floristic company, as well as increase the efficiency of each employee.

The calculation of costs for the development of a software module and the calculation of the economic effect of the implementation are given.

The analysis of dangerous and harmful factors arising during the operation of the application is given.
