Abstract

This diploma project creates a mobile application of a cleaning company on the Android platform. The main goal is to create a convenient and convenient mobile application when contacting a cleaning company and effectively solve the problem.

When completing a diploma project, the Android Studio program and the Java programming language are used to create the application. There was also a comparison with other mobile apps. For this task, a unique mobile application was created that will allow you to increase some types of services in the existing mobile applications of the country.
