

ABSTRACT

Theme of the graduation project: "Development of the system "Electronic Dormitory" for a higher educational institution".

The developed "Electronic Dormitory" system for a higher educational institution is designed to automate the work of the commandants of dormitories and all employees responsible for checking into student dormitories. And also this system provides transparency and justice in the settlement of students, eradicating the corruption factor.

The diploma project was made in the format of a web platform. Technologies such as HTML, CSS, PHP, and JavaScript were used to achieve the goal of the diploma project being developed.

In addition, a financial calculation of the cost and price of developing the program, an assessment of the financial need for the project being developed, and measures to improve the quality of industrial lighting were proposed.
