The summary

The aim of this diploma work is - conducting and realization of the information portal, which can be useful for preschool children, in order to help them, and to help them grow up.

This system helps users to find out interesting information about child's behavior when they grow up. Inside of system, you can find administrational interface that is very helpful for users who are unfamiliar with the instruction.

The system allows you to provide multi-user access to a single database, while allowing multiple users to work simultaneously with information without compromising it. The system contains two languages, Kazakh and Russian. To implement the information system, programming languages such as PHP, JavaScript, HTML, CSS, etc are used. The web interface is developed using the latest web technologies and meets all modern software standards. The project's business plan has been calculated. In the section life Safety, the calculation of working conditions, lighting parameters, noise, ventilation system and microclimate is made. In the Economics Department, I ran calculations to determine how long it would take to build an information system, what devices would be required, and how effective it would be. The diploma project consists of an introduction, five parts and a conclusion.

System gives for all users' possibility to use it in any time, without any problems. Also, in the future informational system of this program will be widely changed
