

## **Annotation**

Theme of the graduation project: “Web-application development for «ARLAN SI» LLP.

The aim of the graduation project is to develop a software product that provides users with the opportunity to find telecommunication solutions.

To achieve this goal, the following technologies were used:

- development of the client interface: HTML, CSS, JavaScript;
- development of the server side: Node.js, Express.js;
- database design: DBMS MongoDB.

The graduation project consists of introduction, 5 chapters and conclusion.

The introduction reveals the main goal of the project, describes the relevance of the website. The following 3 chapters describe the development of the site. Chapter 4 describes the sanitary-hygienic assessment of labor, and also calculates conditioning. In the fifth chapter, a feasibility study was made on the feasibility of the project being developed.
