

The Summary

The main solution for the given task is the development of an information system for the car service. The information system allows you to simplify the workflow of car service. Orders, customer feedback, storing, importing and exporting data are the main focus in this project. Order import gets done by MySQL database and plays an important part in the project. Entire process is conducted using database. Application allows you to make an order and store it in database. Customer feedback executes in a form, using which manager and customer can communicate with each other.
