

Annotation

In this diploma project at the request of LLP " Uniprice.kz " provides for the creation of a mobile application on the Android platform. This application aims to reduce the number of queues at the institution, simplify and speed up the work of entrepreneurs and consumers. No wonder he says that "time is more expensive than six", especially at the present time, this program allows you to save time for any person.

The system development process uses the following tools: Java programming language, MySQL, Open Server.

As part of the feasibility study, the economic efficiency of the project was calculated. The issues of life safety were also considered and the necessary calculations were made.
