

Annotation

In the diploma project, a virtual corporate network was created for demonstration of a corporate e-mail. A practical way of implementing information security using virtual router settings is also shown at this project.

In the part related to risk calculation, safety indicators of some assets of the organization are displayed before and after the implementation of the developed project.

The labour safety section describes the basic requirements for the premises in which the project will be used, and also shows the calculations of the required amount of lighting and air conditioning.
