

Annotation

In this thesis project presents the environmental and occupational risks in the construction industry. The prerequisites for writing the project were methods for assessing environmental and occupational risks on the construction site. The main part defines methods for assessing environmental risks and sources of environmental risk. Special measures were taken to reduce the environmental risk. The sources of professional risks on the construction site are identified, and methods of their assessment are carried out. Also, in the work, calculations were made on life safety and the economic part.
