

## **Abstract**

This thesis project is dedicated to the development of an information system for S&G IT Group LLP to automate the control of business indicators, track the performance of tasks by employees, collect statistics and organize reporting. The purpose of the system is to simplify the management of the organization and work on projects.

This system is implemented as a desktop application. The program was implemented in the C # programming language, the graphical interface was created using the .NET platform UI framework. The MS SQL Server DBMS was used for the project.

The project examines the existing similar systems, structure and business processes of the enterprise, database design, development of information and software.

The result of the project is an enterprise management information system.
