

Annotation

The goal of my thesis project is to create a convenient online library store in a web application. The program is implemented using ASP.NET CORE technology. The languages C#, HTML, CSS and JavaScript were also used. The database was created using MS SQL Server.

In the economic section, all costs for the implementation of the project are determined for each position and the cost of the project is calculated.

The life safety department analyzes the programmer's workplace. Calculations were made for air exchange, natural and artificial lighting at the programmer's workplace.
