Annotation

Currently, due to the development of modern technologies, in everyday life, these technologies are one of the most popular things. Because the services that are being created today simplify the life of humanity.

The purpose of the thesis is the convenience of registering patients in the registry of a dental clinic. The created website is an application aimed at automating the work of a department employee who registers clients who want to use the services of a dental clinic for the necessary procedure.

This site will help not only to facilitate the work of the employee-registrar, but also to customers who want to visit a dental clinic, to make rational use of his time.

The main tasks of the information systems of dental clinics are the provision of dental care to people in all conditions, the management of dental institutions and the information support of the health system.
